DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 13, 15 and 16 are rejected under 35 U.S.C. 102(a) as being anticipated by Misuda et al. (US 6,114,020).

Misuda discloses a recording medium comprising an ink receiving layer on a base material (col. 3, line 54 and col. 4, line 25). The ink receiving layer comprises alumina hydrate having a pseudoboehmite structure (col. 6, line 14), and formed by hydrolyzing aluminum alkoxide and treating the resultant hydrolyzate by deflocculation process (col. 6, line 1). The particle size of the alumina hydrate is 1µm or smaller (col. 4, line 52). The ink receiving layer further comprises a binder (col. 4, line 56), and the mixing ratio of the alumina hydrate and the binder is 1:1 to 30:1 (col. 5, line 4).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1774

4. Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Misuda et al. (US 6,114,020), as applied to claims 13, 15 and 16, above, in further view of Smith et al. (US 5,175,133).

Misuda does not disclose the claimed separation treatment. However, dewatering step such as centrifugation or filtration during production of ceramic particles such as alumina is well known (col. 7, line 64).
